DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of claims 1-6 and 13-18 in Paper No. 7 is acknowledged. The traversal is on the ground(s) that claims are related to each other. This is not found persuasive because the optical device does not require the particular elements of the pulse laser and the pulse laser has separate utility.

The requirement is still deemed proper and is therefore made FINAL.

Double Patenting

Applicant is advised that should claims 1-6 be found allowable, claims 13-18 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Objections

Claims 6 and 18 are objected to because of the following informalities: applicant claims an intended use for the device. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2828

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 and 13-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kidoguchi et al (PN 6,118,800) in view of Saito et al (PN 6,121,634).

In figure 11 Kidoguchi et al illustrates a semiconductor laser having a saturable absorber (1005) to obtain self-pulsation. The semiconductor device (300) has a substrate (1001), an n-type cladding layer (1002) formed on the substrate, a quantum well active region formed on the n-type cladding layer, a p-type cladding layer (1004) formed on the active region, a saturable absorber (1005) formed on the p-type cladding layer. In column 2 lines 34-38, discloses having the energy gap of the saturable absorber smaller than that of the active region.

Kidoguchi et al fails to disclose the saturable absorber doped with N.

In the abstract Saito et al discloses an N doped saturable absorber to obtain a self-pulsation semiconductor device.

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to use the saturable absorber of Saito et al in the semiconductor device of Kidoguchi et al because it would provide for a self-pulsating semiconductor laser.
